

Square numbers

The Year 6 Mathematics Queensland Comparable Assessment Task (QCAT) investigates specific properties of square numbers. This document provides background information and advice for teachers to understand the relationships between **Number**, **Square number** and the **Difference between consecutive pairs** of square numbers, that students will be investigating in Question 2 (page 5, Student booklet).

Identifying square numbers

Square numbers are generated by multiplying a number by itself.

Square numbers are those that can be represented by a square array of dots.

For example:

1 is a square number because $1 \times 1 = 1$ and this can be represented as a square array of dots.

4 is a square number because $2 \times 2 = 4$ and this can be represented as a square array of dots.

Position on a multiplication facts table

Square numbers occupy the spaces from top left to bottom right diagonal in the multiplication table shown below.

| | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|-----|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 | 20 |
| 3 | 6 | 9 | 12 | 15 | 18 | 21 | 24 | 27 | 30 |
| 4 | 8 | 12 | 16 | 20 | 24 | 28 | 32 | 36 | 40 |
| 5 | 10 | 15 | 20 | 25 | 30 | 35 | 40 | 45 | 50 |
| 6 | 12 | 18 | 24 | 30 | 36 | 42 | 48 | 54 | 60 |
| 7 | 14 | 21 | 28 | 35 | 42 | 49 | 56 | 63 | 70 |
| 8 | 16 | 24 | 32 | 40 | 48 | 56 | 64 | 72 | 80 |
| 9 | 18 | 27 | 36 | 45 | 54 | 63 | 72 | 81 | 90 |
| 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 |

Square number patterns

Using different colours to shade adjacent squares highlights the amount of extra squares required to build the next square number. The amount of **Extra squares shaded** represents the **Difference between consecutive pairs**.

| Number | Square number | Extra squares shaded | Generating the square number |
|--------|---------------|----------------------|------------------------------|
| 1 | 1 | - | $1^2 = 1$ |
| 2 | 4 | 3 | $1^2 + 3 = 2^2$ |
| 3 | 9 | 5 | $2^2 + 5 = 3^2$ |
| 4 | 16 | 7 | $3^2 + 7 = 4^2$ |
| 5 | 25 | 9 | $4^2 + 9 = 5^2$ |
| 6 | 36 | 11 | $5^2 + 11 = 6^2$ |
| 7 | 49 | 13 | $6^2 + 13 = 7^2$ |
| 8 | 64 | 15 | $7^2 + 15 = 8^2$ |
| 9 | 81 | 17 | $8^2 + 17 = 9^2$ |
| 10 | 100 | 19 | $9^2 + 19 = 10^2$ |

Another way to represent this diagrammatically is:

Students can describe the pattern created by calculating the **Difference between consecutive pairs** as the sequence of odd numbers.

| Number | Difference between consecutive pairs | Generating the square number |
|--------|--------------------------------------|---|
| 1 | 1 | 1 |
| 2 | 3 | $1 + 3 = 2^2$ |
| 3 | 5 | $(1 + 3) + 5 = 3^2$ |
| 4 | 7 | $(1 + 3 + 5) + 7 = 4^2$ |
| 5 | 9 | $(1 + 3 + 5 + 7) + 9 = 5^2$ |
| 6 | 11 | $(1 + 3 + 5 + 7 + 9) + 11 = 6^2$ |
| 7 | 13 | $(1 + 3 + 5 + 7 + 9 + 11) + 13 = 7^2$ |
| 8 | 15 | $(1 + 3 + 5 + 7 + 9 + 11 + 13) + 15 = 8^2$ |
| 9 | 17 | $(1 + 3 + 5 + 7 + 9 + 11 + 13 + 15) + 17 = 9^2$ |
| 10 | 19 | $(1 + 3 + 5 + 7 + 9 + 11 + 13 + 15 + 17) + 19 = 10^2$ |

A way to represent this diagrammatically is:

Students can also describe the pattern created by calculating the **Difference between consecutive pairs** as increasing by two.

| Number | Difference between consecutive pairs | Generating the square number |
|--------|--------------------------------------|------------------------------|
| 1 | 1 | 1 |
| 2 | $3 = 1 + 2$ | $1^2 + (1 + 2) = 2^2$ |
| 3 | $5 = 3 + 2$ | $2^2 + (3 + 2) = 3^2$ |
| 4 | $7 = 5 + 2$ | $3^2 + (5 + 2) = 4^2$ |
| 5 | $9 = 7 + 2$ | $4^2 + (7 + 2) = 5^2$ |
| 6 | $11 = 9 + 2$ | $5^2 + (9 + 2) = 6^2$ |
| 7 | $13 = 11 + 2$ | $6^2 + (11 + 2) = 7^2$ |
| 8 | $15 = 13 + 2$ | $7^2 + (13 + 2) = 8^2$ |
| 9 | $17 = 15 + 2$ | $8^2 + (15 + 2) = 9^2$ |
| 10 | $19 = 17 + 2$ | $9^2 + (17 + 2) = 10^2$ |

This pattern can be illustrated visually using the reverse L-shape as shown below. The next square number is generated by adding the same number of squares from the previous reverse L-shape and then two more at the ends, shown here in black.

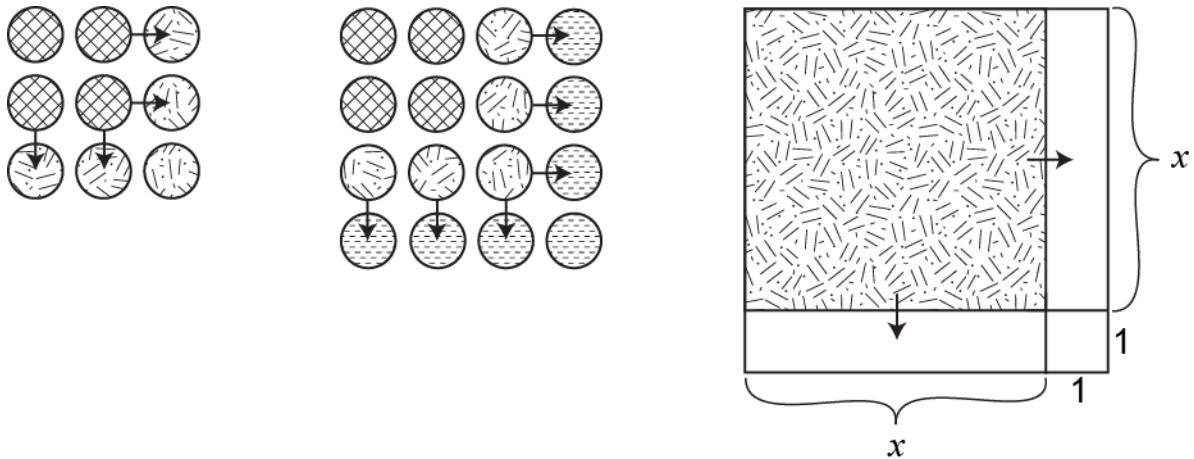

Students can describe the relationship between **Number** and **Difference between consecutive pairs** as the sum of consecutive numbers.

| Number | Difference between consecutive pairs | Generating the square number |
|--------|--------------------------------------|------------------------------|
| 1 | 1 | 1 |
| 2 | $3 = 1 + 2$ | $1^2 + (1 + 2) = 2^2$ |
| 3 | $5 = 2 + 3$ | $2^2 + (2 + 3) = 3^2$ |
| 4 | $7 = 3 + 4$ | $3^2 + (3 + 4) = 4^2$ |
| 5 | $9 = 4 + 5$ | $4^2 + (4 + 5) = 5^2$ |
| 6 | $11 = 5 + 6$ | $5^2 + (5 + 6) = 6^2$ |
| 7 | $13 = 6 + 7$ | $6^2 + (6 + 7) = 7^2$ |
| 8 | $15 = 7 + 8$ | $7^2 + (7 + 8) = 8^2$ |
| 9 | $17 = 8 + 9$ | $8^2 + (8 + 9) = 9^2$ |
| 10 | $19 = 9 + 10$ | $9^2 + (9 + 10) = 10^2$ |

A way to represent this diagrammatically is:

Students can also describe the relationship between **Number** and **Difference between consecutive pairs** as the algebraic relationship, $2x + 1$.

| Number | Difference between consecutive pairs | Generating the square number |
|--------|--------------------------------------|---------------------------------|
| 1 | 1 | 1 |
| 2 | $3 = 2 \times 1 + 1$ | $1^2 + (2 \times 1 + 1) = 2^2$ |
| 3 | $5 = 2 \times 2 + 1$ | $2^2 + (2 \times 2 + 1) = 3^2$ |
| 4 | $7 = 2 \times 3 + 1$ | $3^2 + (2 \times 3 + 1) = 4^2$ |
| 5 | $9 = 2 \times 4 + 1$ | $4^2 + (2 \times 4 + 1) = 5^2$ |
| 6 | $11 = 2 \times 5 + 1$ | $5^2 + (2 \times 5 + 1) = 6^2$ |
| 7 | $13 = 2 \times 6 + 1$ | $6^2 + (2 \times 6 + 1) = 7^2$ |
| 8 | $15 = 2 \times 7 + 1$ | $7^2 + (2 \times 7 + 1) = 8^2$ |
| 9 | $17 = 2 \times 8 + 1$ | $8^2 + (2 \times 8 + 1) = 9^2$ |
| 10 | $19 = 2 \times 9 + 1$ | $9^2 + (2 \times 9 + 1) = 10^2$ |
