

Geography 2025 v1.2

IA1: Sample assessment instrument

This sample has been compiled by the QCAA to assist and support teachers in planning and developing assessment instruments for individual school settings.

Student name	sample only
Student number	sample only
Teacher	sample only
Exam date	sample only

Marking summary

Criterion	Marks allocated	Provisional marks
Explaining	5	
Comprehending	5	
Anaysing and Applying	8	
Communicating	7	
Overall	25	

Conditions

Technique	Examination — combination response
Unit	Unit 3: Responding to land cover transformation
Topic/s	Topic 1: Land cover transformations and climate change
Time	Planning time: 15 minutes Working time: 120 minutes
Seen / Unseen	Unseen
Other	Students may bring into the examination: <ul style="list-style-type: none">• a QCAA-approved non-programmable calculator• rulers free from markings other than measurement indicators.

Instructions

Respond in the space provided on the examination paper.

Task

This examination consists of three short response questions and one extended response question.

Short response

Question 1

- a. In the space below draw and annotate a diagram showing the processes occurring in the ice albedo feedback loop.

- b. Explain how changing albedo of ice is both an indication of and a contributing factor to climate change.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Question 2

- a. Forests act as both a source and a sink for carbon. Explain how land cover change in forests impacts the function of a forest as either a carbon source or a sink. In your response refer to one of the examples studied in class.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

[illegible]

- b. Explain how the changing function of a forest, due to land cover change, impacts climate. Use an example of a specific type of land cover change in your response.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

Question 3

- a. Describe the spatial pattern of Tundra greenness shown on Figure 1.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

b. What indications of climate change could explain the pattern of greenness in the Tundra?

This image shows a single page of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

- c. Complete the consequences wheel to detail the implications of the greenness pattern in the Tundra for people and for places in the region.

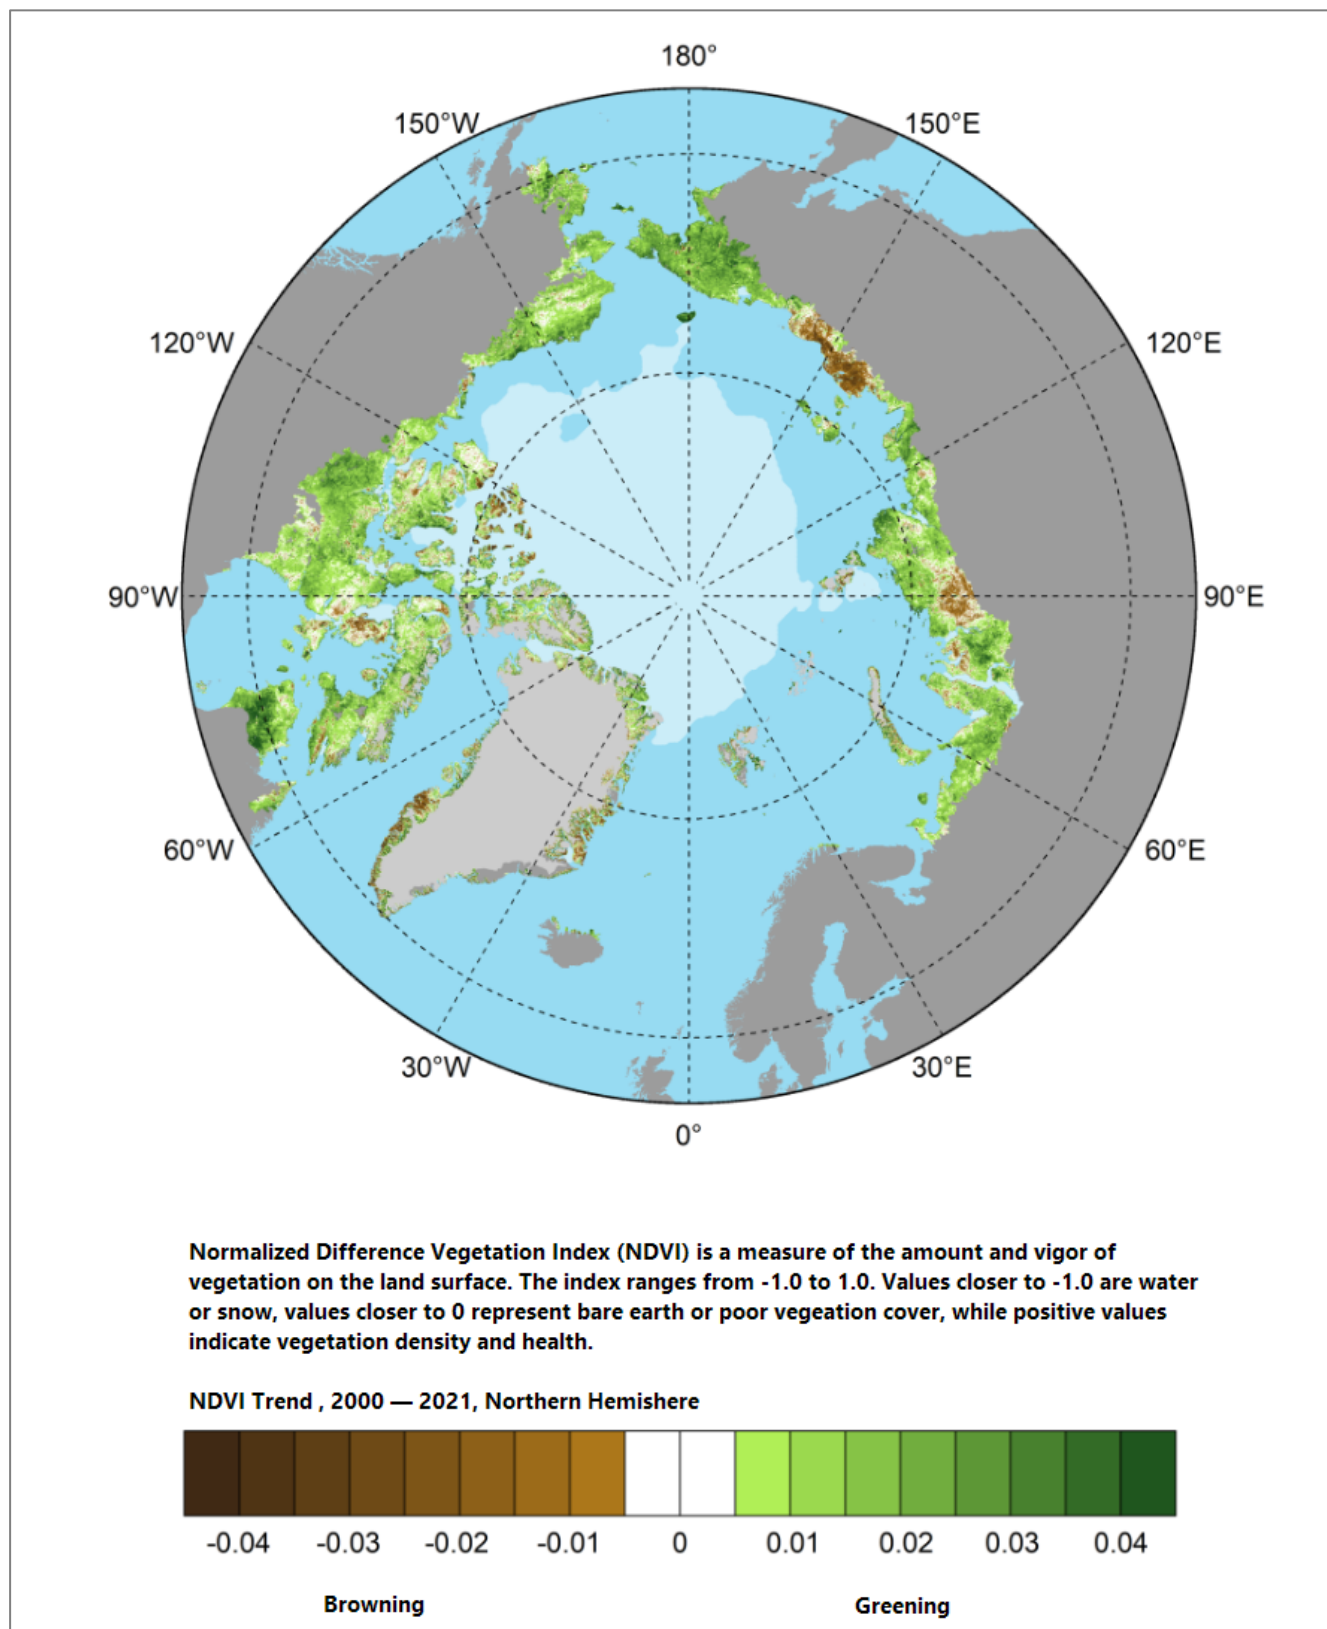

Figure 1: Tundra greenness map

Extended response

Question 4

Analyse the stimulus provided in the Stimulus section to make inferences about how patterns, trends and relationships represent a geographical challenge in relation to climate change for land cover in southeastern Spain.

Apply your geographic understanding from the analysis to generalise about the impacts of the geographical challenge on biophysical and anthropogenic environments in southeastern Spain.

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

This image shows a full page of white paper with horizontal dotted lines, typical of primary school writing paper. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Geography 2025 v1.2 — IA1: Sample assessment instrument
2025–2026

Instrument-specific marking guide (IA1): Examination — combination response (25%)

Explaining	Marks
The student response has the following characteristics:	
<ul style="list-style-type: none"> • detailed explanations of interactions between biophysical and anthropogenic processes that result in land cover change • detailed explanations of interactions between biophysical and anthropogenic processes that result in climate change • explanations of complex relationships between land cover change and climate change 	4–5
<ul style="list-style-type: none"> • simple explanations of interactions between biophysical and anthropogenic process that result in land cover change • simple explanations of interactions between biophysical and anthropogenic process that result in climate change • explanations of simple relationships between land cover change and climate change 	2–3
<ul style="list-style-type: none"> • unclear explanation of interactions between biophysical and anthropogenic processes that result in land cover change • unclear explanation of interactions between biophysical and anthropogenic processes that result in climate change • vague explanation of relationships between land cover change and climate change. 	1
The student response does not satisfy any of the descriptors above.	0

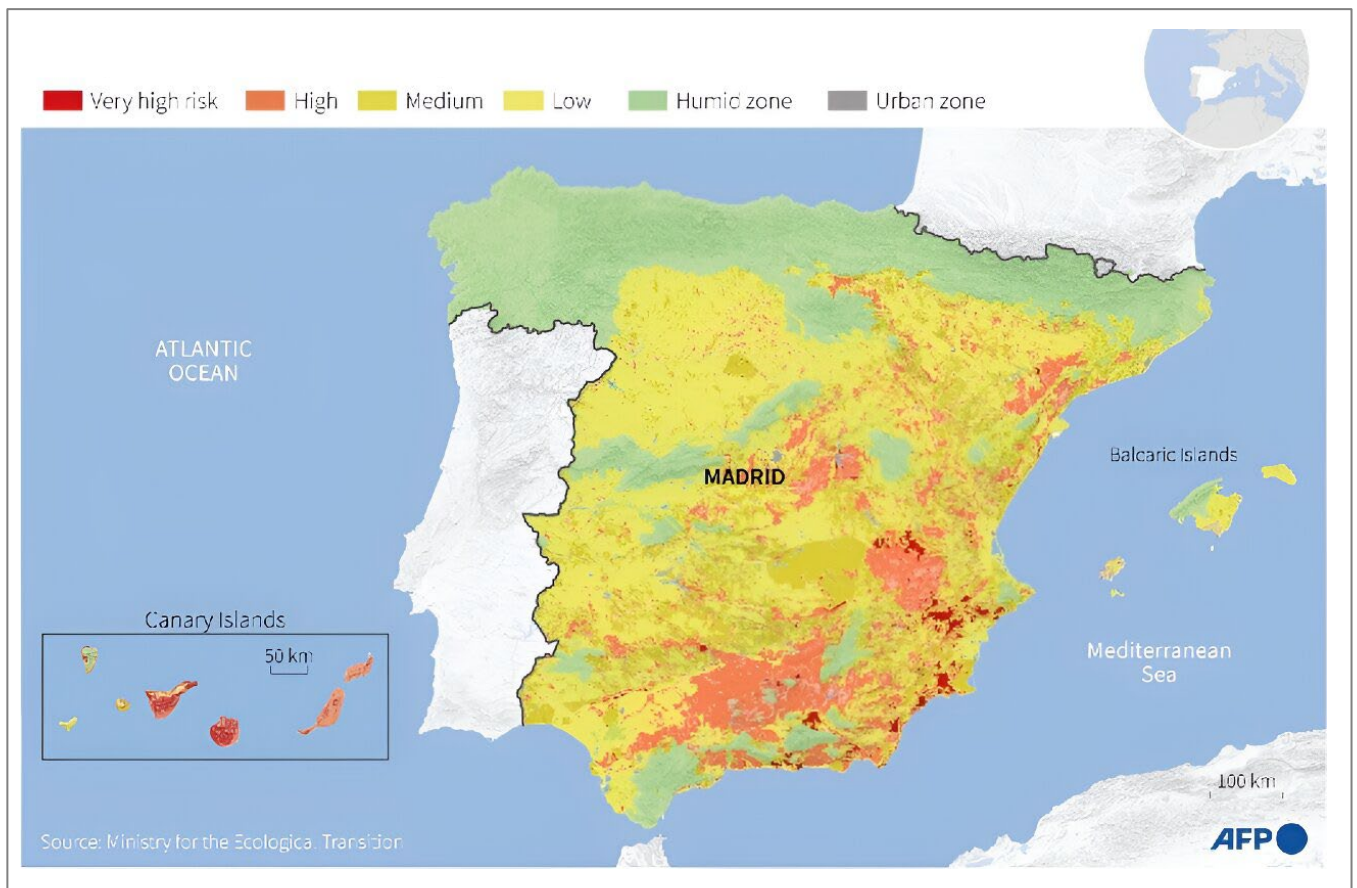

Comprehending	Marks
The student response has the following characteristics:	
<ul style="list-style-type: none"> • recognition of comprehensive spatial patterns of land cover change • recognition of critical indications of climate change • identification of significant relationships and implications for people and/or places 	4–5
<ul style="list-style-type: none"> • recognition of simple spatial patterns of land cover change • recognition of fundamental indications of climate change • identification of rudimentary relationships and implications for people and/or places 	2–3
<ul style="list-style-type: none"> • vague recognition of spatial patterns of land cover change • vague recognition of indications of climate change • identification of irrelevant relationships and/or implications for people and/or places. 	1
The student response does not satisfy any of the descriptors above.	0

Analysing and Applying	Marks
The student response has the following characteristics:	
<ul style="list-style-type: none"> • astute interpretations and inferences that identify how patterns, trends and relationships represent a geographical challenge • discerning use of data and information • sophisticated generalisations about the impacts of the geographical challenge on biophysical and anthropogenic environments 	7–8
<ul style="list-style-type: none"> • logical interpretations and inferences that identify how patterns, trends and relationships represent a geographical challenge • considered use of data and information • reasoned generalisations about the impacts of the geographical challenge on biophysical and anthropogenic environments 	5–6
<ul style="list-style-type: none"> • simple interpretations and inferences that identify how patterns, trends and relationships represent a geographical challenge • appropriate use of data and information • fundamental generalisations about the impacts of the geographical challenge on biophysical and anthropogenic environments 	3–4
<ul style="list-style-type: none"> • vague interpretations and inferences that identify how patterns, trends and relationships represent a geographical challenge • minimal use of data and information • narrow generalisations about the impacts of the geographical challenge on biophysical and anthropogenic environments. 	1–2
The student response does not satisfy any of the descriptors above.	0

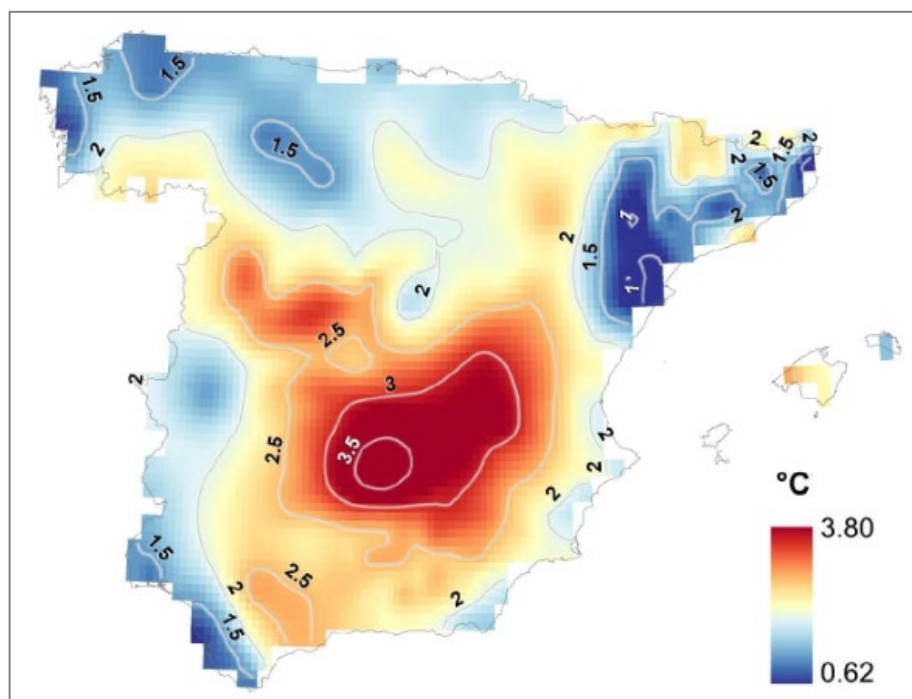

Communicating	Marks
The student response has the following characteristics:	
<ul style="list-style-type: none"> • consistently uses appropriate forms of geographical communication • accomplished use of geographical terminology • adept use of the conventions of written communication 	6–7
<ul style="list-style-type: none"> • uses appropriate forms of geographical communication • considered use of geographical terminology • purposeful use of the conventions of written communication 	4–5
<ul style="list-style-type: none"> • uses relevant forms of geographical communication • appropriate use of geographical terminology • sufficient use of the conventions of written communication 	2–3
<ul style="list-style-type: none"> • uses inappropriate forms of geographical communication • inconsistent use of geographical terminology • fragmented use of the conventions of written communication 	1
The student response does not satisfy any of the descriptors above.	0

Stimulus

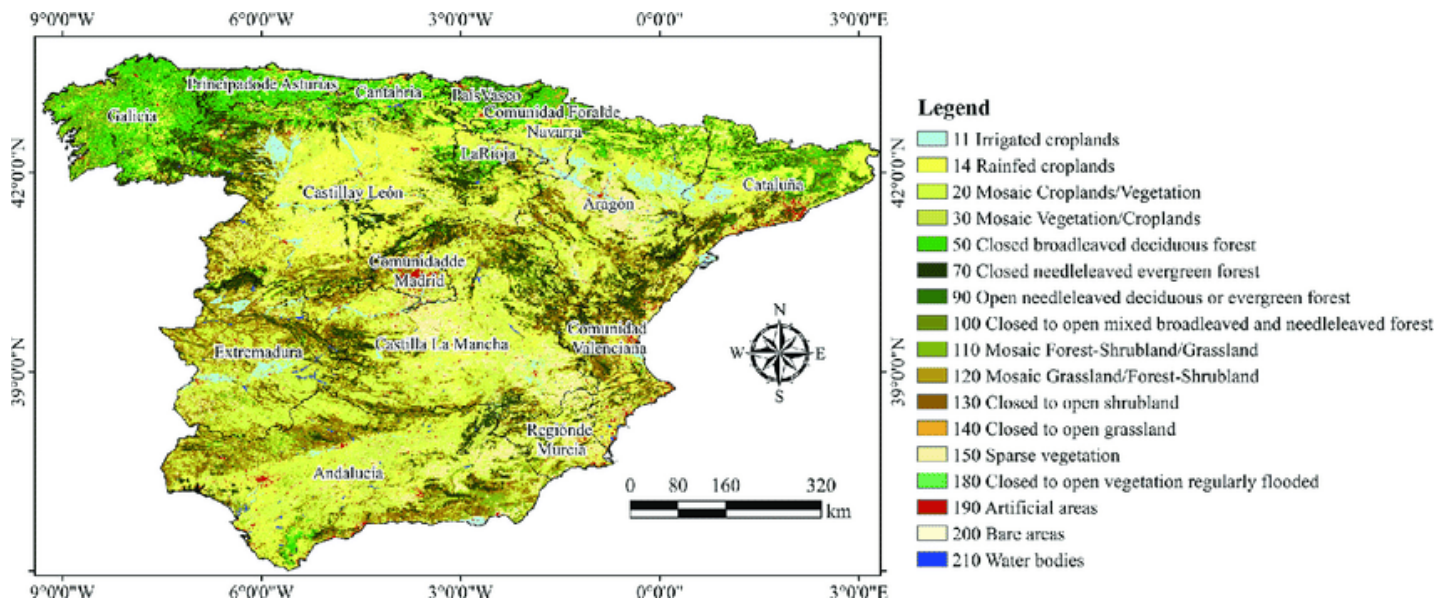

Stimulus 1: Desertification of Spain, 2023

Stimulus 2: Pattern of mean temperature change, Spain 1971–2022

Stimulus 3: Land use Spain

Stimulus 4: Temperature (a) and Precipitation (b) over time, Spain 1901–2023
