Question and response book

# Specialist Mathematics

## Paper 2 — Technology-active

### Time allowed

- Perusal time — 5 minutes
- Working time — 90 minutes

### General instructions

- Answer all questions in this question and response book.
- QCAA-approved calculator **permitted**.
- QCAA formula book provided.
- Planning paper will not be marked.

### Section 1 (10 marks)

- 10 multiple choice questions

### Section 2 (55 marks)

- 9 short response questions

# Section 1

## Instructions

- Choose the best answer for Questions 1–10.
- This section has 10 questions and is worth 10 marks.
- Use a 2B pencil to fill in the A, B, C or D answer bubble completely.
- If you change your mind or make a mistake, use an eraser to remove your response and fill in the new answer bubble completely.

|          | A                                | B                     | C                     | D                     |
|----------|----------------------------------|-----------------------|-----------------------|-----------------------|
| Example: | <input checked="" type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

---

|     | A                     | B                     | C                     | D                     |
|-----|-----------------------|-----------------------|-----------------------|-----------------------|
| 1.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 2.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 3.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 4.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 5.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 6.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 7.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 8.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 9.  | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |
| 10. | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> | <input type="radio"/> |

Do not write outside this box.

## Section 2

### Instructions

- Write using black or blue pen.
  - Questions worth more than one mark require mathematical reasoning and/or working to be shown to support answers.
  - If you need more space for a response, use the additional pages at the back of this book.
    - On the additional pages, write the question number you are responding to.
    - Cancel any incorrect response by ruling a single diagonal line through your work.
    - Write the page number of your alternative/additional response, i.e. See page ...
    - If you do not do this, your original response will be marked.
  - This section has nine questions and is worth 55 marks.
- 

**DO NOT WRITE ON THIS PAGE**

**THIS PAGE WILL NOT BE MARKED**

Do not write outside this box.

**QUESTION 11 (5 marks)**

Teams A, B, C, D and E participated in a competition with the following results:

- A defeated D.
- B defeated A, C and E.
- C defeated A and E.
- D defeated B, C and E.
- E defeated A.

To rank the teams at the end of the competition, the organisers constructed a dominance matrix,  $\mathbf{N}$ , that is partially completed.

- a) By allocating 1 to represent ‘defeated’ and 0 to represent either ‘was defeated by’ or ‘no result’, complete matrix  $\mathbf{N}$ .

[1 mark]

|               |   | Losing teams |   |   |   |   |
|---------------|---|--------------|---|---|---|---|
|               |   | A            | B | C | D | E |
| Winning teams | A |              |   |   |   |   |
|               | B |              |   |   |   |   |
|               | C |              |   |   |   |   |
|               | D |              |   |   |   |   |
|               | E |              |   |   |   |   |

**Note:** If you make a mistake in the matrix, cancel it by ruling a single diagonal line through your work and use the additional matrix on page 26 of this question and response book.

The organisers need to rank the teams into individual places from first to fifth place.

They decide to use the ranking model  $\mathbf{N} + \mathbf{N}^2$  to achieve this.

- b) Use the model  $\mathbf{N} + \mathbf{N}^2$  to rank the teams.

[2 marks]

---

Do not write outside this box.

**QUESTION 13 (6 marks)**

Data records show that the speeds of cars at a particular location on a highway are normally distributed with a mean of  $98.7 \text{ km h}^{-1}$  and a standard deviation of  $4.1 \text{ km h}^{-1}$ . The speed limit at this location is  $100 \text{ km h}^{-1}$ .

A police officer plans to record the speeds of 20 randomly selected cars at this location.

- a) Determine the expected number of cars in the sample that will be travelling within  $\pm 1 \text{ km h}^{-1}$  of the population mean. *[2 marks]*

---

---

---

---

- b) Determine the probability that the mean speed of this sample will exceed the speed limit. *[2 marks]*

---

---

---

---

There is a 5% probability that the mean speed of this sample will exceed  $k$ .

- c) Determine the value of  $k$ . *[2 marks]*

---

---

---

---

---

---

Do not write outside this box.

**QUESTION 14 (5 marks)**

The time,  $t$ , (months) that it takes before a phone owner cracks the screen on their phone can be modelled by an exponentially distributed random variable

$$f(t) = \begin{cases} 0.16e^{-0.16t}, & t \geq 0 \\ 0 & , \text{ otherwise} \end{cases}$$

- a) Show that  $f(t)$  is a probability density function.

[1 mark]

---

---

---

---

- b) Determine the probability that a phone owner cracks the screen on their phone within 1 year.

[2 marks]

---

---

---

---

---

Three-quarters of phone owners take between 1 and  $m$  months before they crack the screen on their phone.

- c) Determine the value of  $m$ .

[2 marks]

---

---

---

---

---

---

Do not write outside this box.

**QUESTION 15 (4 marks)**

The position vectors of points P and Q are  $2\hat{i} - 3\hat{j} + \hat{k}$  and  $2\hat{i} + 2\hat{j} - 4\hat{k}$  respectively.

Let O be the origin.

- a) Determine the angle POQ.

[2 marks]

---

---

---

---

---

---

---

---

---

---

Points O, P and Q are joined to form a triangle.

- b) Determine the area of triangle POQ.

[2 marks]

---

---

---

---

---

---

---

---

---

---

Do not write outside this box.

**QUESTION 16 (6 marks)**

Consider the identity

$$\cos(4\theta) = A \cos^4(\theta) + B \sin^2(\theta) + C \text{ where } A, B \text{ and } C \in \mathbb{Z}$$

- a) Determine the values of  $A$ ,  $B$  and  $C$  using De Moivre's theorem.

*[5 marks]*

---

---

---

---

---

---

---

---

---

---

---

Do not write outside this box.

Blank lined area for writing.

b) State an appropriate method of verifying your results from 16a).

[1 mark]

Blank lined area for writing.

Do not write outside this box.

**QUESTION 17 (7 marks)**

An object is released from rest at a height of 100 m above the ground.

The motion of the vertical descent of the object is modelled by

$$v \frac{dv}{dx} = 9.8 - 0.004v^2 \quad (v \geq 0)$$

where  $v$  is the velocity ( $\text{m s}^{-1}$ ) and  $x$  is the displacement from the ground (m).

Determine the velocity of the object when it strikes the ground.

---

Do not write outside this box.

A large rectangular box containing 25 horizontal lines for writing.

Do not write outside this box.

### QUESTION 18 (6 marks)

The mass of a certain species of kangaroo is known to be normally distributed with a mean mass of  $\mu$  kg and standard deviation of  $\sigma$  kg.

When one of the kangaroos is randomly selected, the probability that its mass is greater than 83.2 kg is 0.145.

When a sample of 12 kangaroos is randomly selected, the probability that the sample mean mass is less than 74.1 kg is 0.079.

A 90% approximate confidence interval for  $\mu$  is calculated using a random sample of  $n$  of the kangaroos that has a sample mean mass of 79.1 kg and a sample standard deviation equal to  $\sigma$ .

Determine the possible range of values that  $n$  could have been, given that the confidence interval did not contain  $\mu$ .

Do not write outside this box.

A large rectangular area containing 25 horizontal lines, intended for writing.

Do not write outside this box.

**QUESTION 19 (7 marks)**

An object is swinging at the end of a 0.5 m length of string in a vertical circular path with a constant angular speed, completing each revolution in 0.24 seconds.

The object is projected from a height of 0.3 m above the ground in a vertical plane and **just** passes over a narrow pole as shown in the diagram. The pole is 2.05 m high and its base is 14 m horizontally from where the object was projected.

A flat-topped vehicle of length 0.6 m and height 0.4 m is initially at rest against the pole as shown in the diagram. At the instant that the object is projected, the vehicle moves in a horizontal direction away from the pole in the same vertical plane with an acceleration of magnitude of  $a \text{ m s}^{-2}$ . The object strikes the middle of the top of the vehicle.

Assuming that air resistance is negligible, use vector calculus to model the motion of the projectile in order to determine the value of  $a$ .
